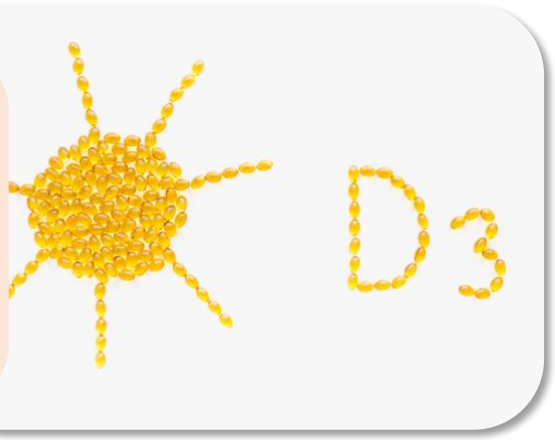
YOUR DAILY DOSE OF SUNSHINE
VITAMIN D3 1.000 IU SOFT PEARLS

Support for Bones and Immunity

Besides food, sunlight is also an important source of **Vitamin D**, as the body can produce Vitamin D in the skin itself with the help of sunlight. However, the body's own production via the skin is sometimes not sufficient to cover the Vitamin D requirement. Especially in the darker autumn and winter months, when the immune system is particularly stressed, the body produces less Vitamin D. In this case, supplementation can be useful. The particularly small pearls are very easy to swallow.

- To support the healthy function of the immune system
- Supports the maintenance of healthy bones & teeth



Product Specifications

Composition Proposal			**% NRV**
	Vitamin D	25 µg	500
